Your mission: **Redesign the** Humor **experience ...for your** Controller
Start by gaining empathy.

1 Interview
8min (2 sessions x 4 minutes each)

Notes from your first interview

We want to make a unique experience by using a controller in an unconventional way.

Switch roles & repeat Interview

2 Dig deeper
8min (2 sessions x 4 minutes each)

Notes from your second interview

We both agree that a controller with humorous control methods that will surprise the user is interesting to us.

Switch roles & repeat Interview

Reframe the problem.

3 Capture findings 3min

needs: things they are trying to do*
*use verbs

Make a funny controller. Pulling levers, flicking switches, and pressing buttons in sequence would be a funny goal.

insights: new learnings about your partner's feelings/ worldview to leverage in your design*
*make inferences from what you heard

Games with unconventional control schemes such as "Iron Lung" and"Stop talking and nobody explodes" inspire my partner.

4 Define problem statement 3min

Andrew
name

needs a way to **use a controller in unconventional ways.** .
user's need

Unexpectedly, in his/her world,

Inputs must be performed in sequence using alternate types of sensors.
insight

Ideate: generate alternatives to test.

5 Sketch 3-5 *radical* ways to meet your user's needs. 5min

write your problem statement above

CSGO bomb but wacky

Nintendo labo house

Radar game with physical buttons

6 Share your solutions & capture feedback. 10min (2 sessions x 5 minutes each)

Notes

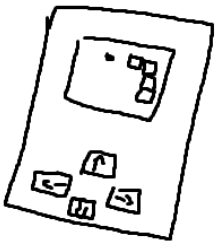
The bomb could have many hidden input devices on it to make an interesting defusal game.

Iterate based on feedback.

7 Reflect & generate a new solution. 3min

Sketch your big idea, note details if necessary!

Flip the device over to reveal a second game on the back!



Play snake for 30 seconds to diffuse the bomb

Build and test.

8 Build your solution.

Make something your partner can interact with!

6min

9 Share your solution and get feedback.

+ What worked...

- Shape is good
- Buttons and display are a nice size

- What could be improved...

More sensors and input methods

? Questions...

How will these input methods connect to a larger game?

! Ideas...

We could have the entire game controlled with a Raspberry Pi using C++ for gameplay logic.

8min (2 sessions x 4 minutes each)
